

## ***InControl – Upgrade to infrared***

As easily and comfortable as you control the TV with a remote control as easily you can switch the lights in your room now, the electric roller blinds, window opener etc.

**InControl** uses infrared technology to control the receiver anywhere in your room.

Every single receiver can be programmed to one of 16 addresses. Thus many different (up to 16) switching functions in one room can be obtained with one remote control.

## ***Just a click***

With just a button-click from your chair you change the lighting scenery. There's no need to move from switch to switch.

Really unique is the possibility to operate the roller-blinds and window-openers in the same manner.

**InControl** is not only comfortable, it is intelligent.

The installation in new building projects reduces wiring cost and complexity.

Upgrade installation is easy and convenient: The old switches are simply exchanged with a new **InControl** IR-switch.

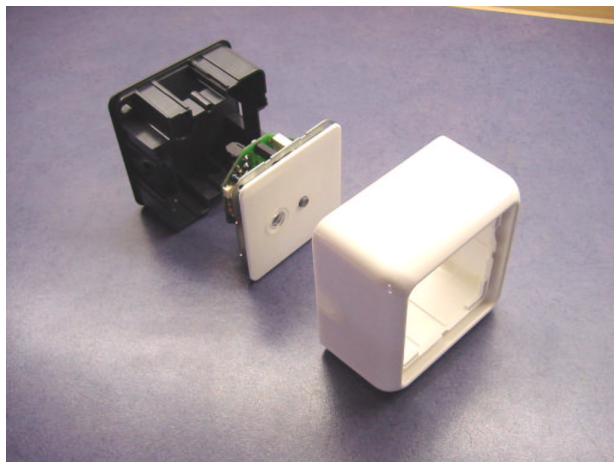

The advantage is plain to see.

## ***Environmental control***

**InControl** perfectly suits the needs of severely disabled people: Having the living area equipped with **InControl** technology, it is easy for the patient to control everything from bed or wheelchair. If mobility is reduced too much, an environmental control system like Medius, Nemo, SiCare Pilot or James can help. **InControl** components are compatible with all environmental control systems.

## ***Technology***

The **InControl** UP switching units are available with one (Simplex) as well as with two switching contacts (Duplex). The point is: Every contact point is fed potential-free to a terminal. So every switch can be wired as desired. By this means, **InControl** can switch anything.

The switching characteristics itself is freely programmable: Pulse, continuous, on/off or toggle. Each switching unit is programmable separately.

**InControl** is mechanically compatible and can be combined with the program of Jung Inc.

## ***Technology***

Wall mount: Standard switch wall mount recess  
60mm dia.

Switching capacity: 220V~/6Amax.

Idle current consumption: 6.5W approx.

Weight: ~ 200gr.
